

Real Storage to Distribute Enhance Technology's UltraStor™ Storage Line

Santa Fe Springs, California - Sept 25, 2003

Enhance Technology, Inc. announced today a partnership with Real-Storage. Enhance Technology's UltraStor ATA-based storage systems will now be available through Real-Storage, a premiere storage solution provider in southwest Florida. Luis Rodriguez, Director of Business Development with Enhance Technology, Inc., said, "We are very excited to have the opportunity to offer our award winning UltraStor storage line to the Southwest Florida marketplace. This alliance allows Enhance Technology, Inc. to continue to develop a presence in the emerging storage and disk-to-disk backup arena. Anthony Centore, President of Real-Storage adds, "We are proud to "Enhance" our product line with a proven and reliable storage solution. We look forward to offering our clients the best product possible."

For a limited time, Real-Storage is offering a FREE APC power solution matched with each purchased storage product. Get the Storage ! Get the Power ! Get Real !

About the UltraStor ATA Storage Line

The UltraStor product line is a uniquely engineered ATA-based storage system built on three fundamental principles, quality, performance and value. UltraStor benefits from extensive research and design with capabilities that extend beyond the range of competing systems. Every UltraStor features our custom ASIC optimized to ensure performance and maximize data bandwidth. Active components are hot swappable for easy maintenance and field replacement. UltraStor leverages the benefits of high reliability and performance with the cost-effectiveness of commodity ATA technology - a best of both worlds scenario that is revolutionizing the storage market.

About Real-Storage

Real-Storage is a cutting edge developer, integrator, and manufacturer of intelligent network and storage solutions. Our mission is to provide innovative solutions designed for storage-intensive environments that require ease of use, dependability, and uninterrupted access to mission-critical information.
